

Control Risks

ONE.

Paris Games 2024

Your proactive, prepared and responsive risk management and security partner.

Our Global Risk and Operations Centre (G-ROC) makes planning, visiting and working in complex and unfamiliar locations safer. With decades of major sports events experience (including Olympic Games and FIFA World Cups), we are uniquely positioned to drive positive risk management in the lead up to, during and beyond the Games.

How our Global Risk and Operations Centre can help you in Paris

Surge Capacity

We can provide extra specialist capacity and coverage to your security teams during the Games. You're likely to experience an increase in smaller incidents distracting you from the major business issues you're already dealing with.

Always on hand – security monitoring you can trust

Every day, your Senior Risk Consultant will harness the power of Seerist technology and other data sources to provide your Bespoke Monitoring Report. Should your thresholds be met (or passed) they'll alert you, help you put it into context and define a plan of action with practical operational guidance.

Your Consultant will monitor your assets – whether specific active sites (i.e., fan zones), targeted events, specific personnel or guest locations throughout the greater Paris area. We will also monitor any trending reputational risks for any incident suspected to impact your operations and your assets.

Planned with care - let us deal with the complexities of working and travelling around Paris

For the duration of the Games, your designated users have direct access to our advice and support on any security

situation. We can record incidents, by serving as a central point of escalation for any incidents requiring further plan of action or deployment of physical support.

Advisory and Local Reality Check – benefit from our knowledge and our networks

Our network of local liaison officers guarantee exceptional quality host-nation knowledge and language support.

From advice to full resolution

Control Risks ONE goes beyond advice to assist you in mobilising resources on-the-ground or in-house, helping you bring a swift resolution to crises.

Using Seerist to see ahead

Advanced algorithms intelligently identify emerging threats, helping you stay alert and proactive.

We access real-time, interactive data on your locations during the Games, keeping you informed about developments.

Geolocation tracking monitors chatter and breaking news within a 1- 25 mile radius of your routes and the venues.
